Profile

As an **Associate Software Engineer** with 6+ months of experience, I work across the full stack with a strong focus on the **MERN stack** and **Next.js**. While I specialize in building modern, scalable web applications, I also actively solve complex issues in existing codebases and legacy projects. Whether it's frontend UI, backend logic, or performance bottlenecks—I enjoy turning challenges into clean, efficient solutions that deliver real value.

Education

Bachelor of Science in Software Engineering, *University Of Sialkot* 2020 – 2024
Sialkot, Pakistan

Skills

- | | |
|----------------|-------------------|
| • JavaScript | • Typescript |
| • React JS | • NextJS |
| • Tailwind CSS | • ExpressJS |
| • MongoDB | • SQL |
| • Redux | • Problem Solving |
| • Git | |

Languages

- | | |
|--------|-----------|
| • Urdu | • English |
|--------|-----------|

Projects

NeonIQ 03/2025 – present

- Solves user queries instantly using Groq API.
- AI streaming responses come from the backend to protect API keys.
- Enable or disable detailed logic in answers.
- Clean, modern look with React Markdown for styled output.

Ahmasoft 07/2024 – 12/2024

- Developed a dynamic and user-friendly website for Ahmasoft, a startup offering professional services.
- Utilized React.js to create responsive and interactive user interfaces, enhancing the user experience.
- Implemented modern design principles and optimized website performance for seamless functionality.
- Collaborated with stakeholders to ensure the website aligned with business goals and branding.

Food Ordering App

03/2024 – 06/2024

- Users can browse and choose their favorite food items from a menu.
- Selected items and their selected quantities are added to the cart in real-time.
- The cart dynamically updates as users add or remove items.
- The total bill is calculated and displayed in real-time based on the selected items and their quantities. Any changes in the cart (adding/removing items) reflect immediately in the total bill.
- MongoDB database is used to save the data of user SignUp & Login.
- ExpressJS is used for backend in which API is made.

Blogging App

01/2024 – 03/2024

- The website adapts to various screen sizes (desktops, tablets, smartphones).
- Display a list of blogs fetched from an API made in ExpressJS.
- Paginated display with 12 blogs per page.
- A dedicated section showcasing the latest blogs.
- Users can filter blogs by categories: Startups, Security, AI, Apps & Tech.

Professional Experience

Software Engineer Intern, *SevenStacks*

12/2024 – 01/2025

- Assisted in developing and maintaining frontend features using **React.js** and **Next.js**.
- Participated in debugging sessions to identify and fix critical issues in long-term client projects.
- Gained hands-on experience in converting **Figma designs into responsive, pixel-perfect UIs**.
- Learned best practices in component structure, API integration, and project version control (Git).

Lahore, Pakistan

Associate Software Engineer, *SevenStacks*

02/2025 – present

- Promoted from intern in first month based on performance and proactive contributions to complex projects.
- Leading frontend development on enterprise-scale applications using **MERN stack** and **Next.js**.
- Specialized in resolving edge-case UI bugs and proposing scalable, maintainable frontend solutions.
- Worked across cross-functional teams to develop features in **AI** and **healthcare domains**.
- Continuously optimized code performance, accessibility, and responsiveness across devices.
